A truly multi-talented ingredient

WorléeSqualane Olive

Nourish your body head-to-toe with the best of nature. Due to its multifunctionality, our upcycled WorléeSqualane Olive can be used in a wide range of cosmetic formulations for face, lip and body care, as well as in color cosmetics.

Given its high spreading capacity, the colorless hydrocarbon obtained from olives enables emulsions to be spread evenly on the skin and leaves a unique, silky-soft, non-greasy skin feel. Its excellent pigment dispersion properties make it an ideal ingredient for the development of make-up formulations. Its texture also makes it highly suitable for supporting the performance of make-up removers. As a result of its oxidation stability, the product is ideally suited for use in natural sunscreen protection formulations. In hair care products, it improves the combability of the hair without weighing the hair down.

The vegetable origin of WorléeSqualane Olive is verified for each batch by isotope determination (13C/12C). It has a purity level of at least 92% squalane content and is validated according to Ecocert and COSMOS standards. The use of GMO or animal ingredients is deliberately avoided. WorléeSqualane Olive is ideally suited for applications in natural cosmetics and picks up on the clean label and vegan trend.
